

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph from page 3, lines 3-6 with the following replacement paragraph:

K1 The apparatus can also include a performance indicator for providing an indication that the home appliance operation has been performed[[.]] and a data store, readable by the image processor, for storing data representative of the gesture and of the home appliance operation.

Please replace the paragraph from page 7, lines 24-30 with the following replacement paragraph:

K2 Depending on the gesture that is recognized, the operation processor can send a signal to the oven's computer that emulates the signal the oven's computer would have received [[is]] if the user had pushed the appropriate buttons on the oven itself. For example, pushing the oven on button might cause a certain signal to be sent to the oven's computer. The oven's computer would then turn the oven on. Accordingly, the operations processor of the invention can send the same signal directly to the oven's computer, thereby causing the oven's computer to turn the oven on.
